

**Amendments to the Specification:**

Please amend the paragraph beginning on page 6, line 10 as follows:

The breaking strength of the perforated break line can be set to be from 0.2 to 5.0 N per perforation.

Please amend the paragraph beginning on page 8, line 7 as follows:

Various methods can be used as a print method of the circuit 14 onto the base material film [[14]] 11, and a print method used for manufacture of various circuits, such as an integrated circuit and a flexible circuit, can be applied. Besides, the formation method of the circuit 14 is not limited to the print, and various methods used for circuit formation, such as an evaporation method and a plating method, can be used.
